I

3. Write Java Program:

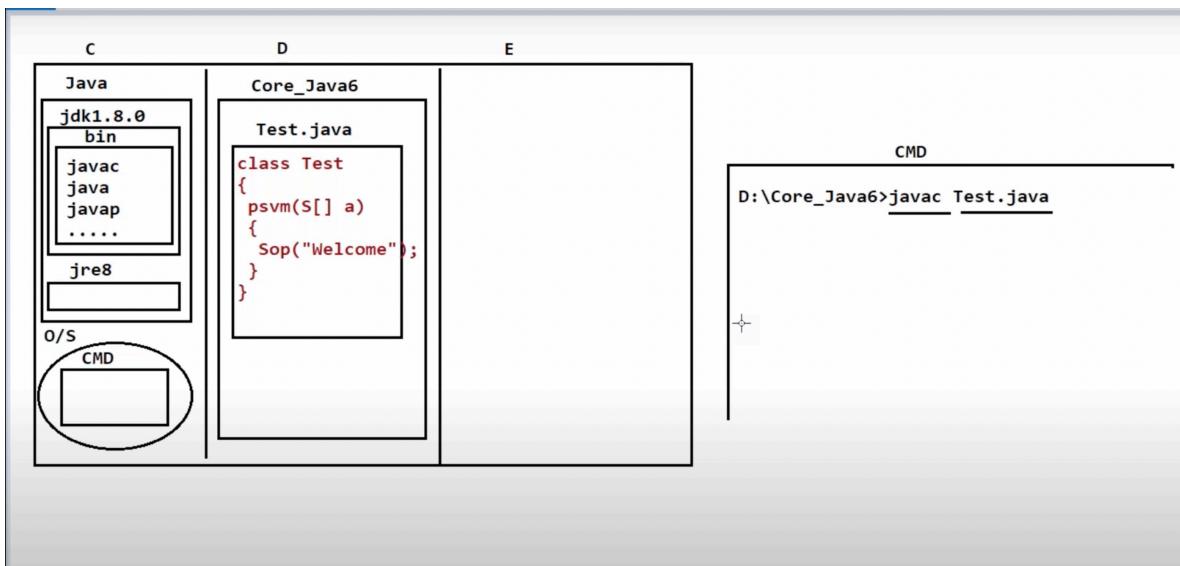

1. Main Class

2. main() method

3. System.out.println("Welcome");

I

```
class Test
{
    public static void main(String[] args)
    {
        System.out.println("Welcome To Java");
    }
}
```

Q) Is it possible to provide more than one public class in single Java file?

Ans:

No, it is not possible to provide more than one public class in single java file, because, if we provide more than one public class in java file then we must save that java file with more than one name, it is not possible in all the Operating Systems.

```
class Test
{
    public static void main(String[] args)
    {
        System.out.println("Welcome To Durgasoft");
    }
}
```

```
D:\core_java6>javac abc.java
```

```
D:\core_java6>java Test  
Welcome To Durgasoft
```

```
D:\core_java6>
```
